PROFESSIONAL SUMMARY

Software engineer with 3+ years of experience building secure, scalable applications across front-end and back-end systems, including hands-on work with authorization architecture, microservices, and production-grade testing. Comfortable working directly with stakeholders to turn shifting requirements into shipped features, and looking for a team where I can take on more ownership over system design.

SKILLS

Languages: Python, TypeScript, SQL, Scala

Frameworks & Tools: React, Next.js, FastAPI, Docker, REST APIs, PostgreSQL, GitLab, Kubernetes, CI/CD, Playwright, Salesforce Lightning Web Components

Security & Architecture: Row-level security, multi-tenant authorization design, access-control auditing

AI-Assisted Engineering: AI-driven planning and code generation workflows, multi-model review processes

Soft Skills: Collaboration, Technical Planning, Stakeholder Communication

WORK EXPERIENCE

Software Engineer (Contract)

June 2026 - September 2026

Luris AI — startup building AI-driven workflow tools for attorneys

- Rebuilt PostgreSQL row-level security and a shared FastAPI authorization layer across 3 services to enforce attorney conflict-of-interest rules under ABA Model Rule 1.6/1.9, shipping 7 production PRs and closing a critical WebSocket vulnerability that exposed private user notifications.
- Merged 80+ PRs and closed 100+ issues across a Next.js frontend and 8 Python microservices in under 10 weeks, including tracking down a production login failure and a file-upload bug blocking large client document uploads.
- Pioneered a multi-model AI planning workflow — separate architect, implementer, and adversarial-review passes — that caught security issues early and became the team's standard process.
- Built an automated Playwright suite covering 13 real-world failure scenarios in the client intake flow, catching 2 defects before they shipped.
- Cleaned up a config-drift problem spanning 150+ files by consolidating hardcoded values into one source of truth, with CI checks to keep it from happening again.

Software Engineer

June 2023 - May 2025

Security Industry Specialists

- Built a new HR onboarding/hiring app that cut candidate search time by 80% & automated 73% of manual hiring steps.
- Built custom Salesforce apps with code-based Lightning Web Components so the HR director could pull job-site and employee stats directly.
- Set up a library of reusable front-end components the team could pull from instead of rebuilding UI pieces each time.
- Supported custom applications (HRIS, ATS, Expense Management, Onboarding, Hiring) for over 6,000 employees, maintaining legacy Scala services and containerized per-API deployments (Docker, Kubernetes via Lens) across GitLab-hosted repositories as part of a 7-person engineering team.

PROJECTS

College Basketball Web Scraper

Current

Python

- Using AI coding tools to speed up building a college basketball data scraper and sharpen my AI-assisted development skills as the first step toward a personal app for streamlining March Madness picks.

Personal Site

Current

TypeScript

- Building this to round out my full-stack skills and have a place to showcase my work.

EDUCATION

Gonzaga University

May 2023

Software Engineering Management, General Business

Coursework: Software Development, Algorithms and Abstract Data Structures, Database Management Systems, UI/UX Design
